PROJECT REPORT

SUBJECT – DIGITAL LITERACY

COURSE CODE-CSE0001

TASK 1:

For creating this visual slide, I used Canva because it is simple to use and provides many ready-made templates, icons, and design elements. It helped me arrange my ideas properly without needing advanced designing skills. My design focuses on the concept of digital literacy among students. It highlights how important it is to use the internet safely, communicate properly through emails, and stay aware of online threats. I also included small

visual elements like icons and headings to make the slide more understanding.

One thing I found a bit difficult was choosing the right combination of colors and layout. At first, the slide looked too crowded and confusing, so I had to adjust the spacing and remove some extra elements to make it look clean and clear. However, this process was also interesting because I learned how small design changes can make a big difference in presentation quality. Overall, it was a good learning experience.

TASK 2:

For my project, I chose a few important platforms that can help me grow both academically and professionally. First, I selected GitHub, which is mainly used for storing and managing code. It also helps in collaborating with others and showcasing projects to recruiters. Second, I chose LinkedIn, which is a professional networking platform. It is useful for connecting with industry experts, sharing achievements, and exploring job opportunities. Third, I picked Canva, which is a design tool used to create presentations, posters, and other visual content easily.

Over the next four years, I plan to use GitHub regularly to upload my coding projects and improve my development skills. I will stay active on LinkedIn by updating my profile, posting my achievements, and building a strong professional network. Canva will help me in making attractive presentations for college assignments and projects. By using these platforms consistently, I aim to build a strong portfolio, improve my skills, and prepare myself for future career opportunities.

TASK 4:

A situation where poor digital communication caused a problem can be seen in a college group project. One team member sent important instructions through email, but the message was unclear and lacked proper details about deadlines and task division. Some members misunderstood the instructions, while others didn't check their email on time. As a result, the project was incomplete and submitted late, affecting everyone's grades.

This problem could have been avoided with better communication. The sender should have written clear and specific instructions, including deadlines and assigned roles. Using a platform like WhatsApp

or Google Classroom for quick updates and confirmations would have helped ensure everyone received and understood the message. Regular follow-ups and acknowledgments from team members could also prevent confusion. Clear, timely, and structured communication is essential to avoid such issues.

TASK 5:

While researching this topic, what surprised me most was how common cyber fraud and data misuse have become, even among students. I found that even a small mistake, like clicking on an unknown link or sharing an OTP, can lead to serious consequences such as financial loss or identity theft. It was also surprising to see how scammers use trusted platforms like WhatsApp and Instagram to trick people, making their messages look genuine and urgent so that users react without thinking.

As a result of this learning, one habit I will personally change is being more alert and cautious while using the internet. I will avoid clicking on suspicious links, double-check the sender's identity, and never share personal or banking details online without proper verification. This change will help me stay safe and use digital platforms more responsibly.
